1. **Interactive migration of legacy databases to net-centric technologies**
Bychkov, Y.; Jahnke, J.H.;
Reverse Engineering, 2001. Proceedings. Eighth Working Conference on
2-5 Oct. 2001 Page(s):328 - 334
Abstract:

Due to the rapid growth of e-commerce (and other Internet-related technologies), many
to migrate their information systems to the net-centric environment. We are proposing a
(Varlet/Babel) that helps the user to achieve this goal. This is accomplished in two stag
stage, a database schema is obtained and refined, then an XML description for the dat
generated and used to wrap access to the information system. In this paper, we focus
stage and describe the methods that are used to create a mapping between the genera
a standard (interchange) schema and to make a second wrapper around the informatio

Visual DataFlex and XML

A Data Access Worldwide White Paper
by Chris Hibbert

November 2000
Last Edited: January 18, 2001

Overview

This article deals with specific points of Windows and Internet technology from a "What can this do for me" point of view in the context of using Visual DataFlex Version 7.

This article examines the usage of Extensible Markup Language (XML) data files with Visual DataFlex. We start with an initial high level view of what XML offers, and how Visual DataFlex makes using it a simple process. For those with a more technical interest, a little more in-depth illustration of examples of XML files follows, and of program code to put them to use. These are not tutorial material, being intended as "overview examples" for those seeking a general familiarization with the topic; and its potential, the primary purpose of the article. No detailed knowledge of HTML or XML is assumed.
